

Three steps for Deep-Learning

Step1: fully connect feedforward Network

This is a function.

Input vector, output vector

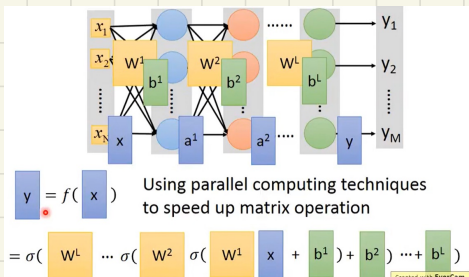

$$f\begin{bmatrix} 0 \\ 0 \end{bmatrix} = \begin{bmatrix} 0.51 \\ 0.88 \end{bmatrix}$$

Given network structure, define a function set

Fully Connected Feedforward Network
以后经常

Deep = many hidden layers

使用GPU加速

Step 2: Loss for an example

For all training data

$$L = \frac{N}{n} C_i$$

- ↓ find a function in function set that minimizes total loss L .
- ↓ find the network parameters θ^* that minimize total loss L .

Gradient Descent
